

## Categories

Categories are broad areas  
i.e.,  
"Mathematics"  
"Programming"  
"Physics"  
etc

Topics are subsets of knowledge  
ie  
"Linear Algebra"  
"Web Programming"  
"Rotational Dynamics"  
etc.

Cycles are used to track that review of a resource  
has happened. A topic cycles once when all resources  
for that topic have cycled once. Categories cycle  
when all topics for that category have cycled.
